

## Activity – Workplace Transport

ABC Supplies Ltd has moved to new premises, a sketch of which is below. You have been given the job of ensuring that the site is designed to minimise workplace transport risks.

Vans and forklift trucks will both use the site, and will need to travel safely from the road to the warehouse. Use the sketch to plan how you want the site to be laid out to ensure the risks of workplace transport are minimised.

You may want to include things such as:

- One way systems
- Physical barriers
- Floor markings
- Pedestrian crossings, etc.
- Mirrors
- Lighting
- Speed bumps
